

Gunnebo SafeStore Auto

Automated safe deposit locker systems,
reimagined for the next generation

Ready for the future. Designed for today's self- service environments.

SafeStore Auto combines advanced automation with secure customer identification to deliver 24/7 self-service access without compromising premium security.

Meeting higher demands with flexibility and comfort

In a time when convenience is expected, individuals and companies seek security solutions that match their lifestyles and business models: seamless, secure, and always accessible. Whether storing gold, jewellery, documents or digital backups, today's customers expect more than traditional safe deposit boxes.

Challenges with traditional safe deposit locker systems

Despite playing a crucial role in secure storage, traditional safe deposit locker systems tend to fall short of meeting the evolving needs of modern banking and high-end environments.

Limited security integration: While technologies like biometric ID, PIN access, and surveillance enhance selfservice security, many traditional systems offer only one or two. This compromises the level of protection. Without a unified, multi-layered authentication process, the risk of unauthorised access remains.

Lack of customisation: Conventional lockers are often bulky, static vaults designed around staff-assisted access. This one-size-fits-all model leads to unnecessary costs and lacks adaptability for different environments. As the demand for compact, modular, and mobile solutions grows,

traditional systems struggle to keep up with the shift toward selfservice areas in banks, hotels, and other environments.

Restricted access hours: Most traditional systems require staff presence for locker access, limiting availability to standard business hours. This creates friction for customers, especially as studies show that 59% of safe deposit access occurs outside regular times, including early mornings, late afternoons, weekends, and holidays.

Outdated identification methods: Advanced identity verification technologies, such as biometric scanning, PIN and card access readers, and CCTV, are often missing or fragmented in older systems. Without a modern, integrated solution, user experience and system integrity are significantly compromised.

Reliability is luxury

Your customers demand more, and so should you. SafeStore Auto presents continuous innovations in hardware, software, technology, and design, offering a high-end solution for financial institutes, banks, private investors, hotels, casinos, and other self-service environments.

Gunnebo SafeStore Auto is a fully automated safe deposit locker system that combines 24/7 access, advanced identification, and a sleek modular design. It delivers a premium user experience without compromising on security or operational efficiency.

Benefits compared to traditional deposit lockers:

1. **24/7 access** for increased utilisation, flexibility, and user independence
2. **High-security authentication** with top-class biometric, PIN, and ID matching
3. **Lower operational costs** through automation and zero staff involvement
4. **Modular design** for seamless integration into any area
5. **Luxury experience** aligned with premium brand environments
6. **Seamless** integration with SafeControl Manager for cost-efficient solutions, such as a weight-based billing feature

Reimagining the safe deposit space

Always reinventing itself to stay at the cutting edge of technology, SafeStore Auto is the next generation of secure storage and safe deposit. Backed by user insights and industry research, this enhanced system combines **new technology and improved flexibility** to deliver an experience that is as refined as it is reliable.

Automated technology

Access to the secure self-service area is available around the clock via a card reader with an encrypted connection, password, **advanced biometric authentication** and OTC one time code function. The system automatically retrieves and delivers the designated locker compartment to the terminal. Once the transaction is complete, the locker is securely returned to the vault without the need for staff assistance at any point. The new high-precision optical fingerprint reader ensures fast, reliable identification and enhances the user experience, especially in self-service settings. Fully integrated into **SafeControl Manager**, it forms part of a robust multi-factor authentication suite.

Self-service at its best

With a **user-friendly interface** and a card reader as easy to use as an ATM, the terminal simplifies self-service access. The responsive touchscreen meets accessibility standards, while customisable colours and materials allow seamless integration into any space and brand identity. An **integrated weighing function** prevents locker overloading and minimises technical issues by tracking deposits in real-time. Available for the SSA Maxi, the optional **flexible box configurations** and modular shelving reduce material use by up to 20%, creating a lighter system that is easy to install and evolves with your needs. The new boxes configuration is automatically mapped by SafeControl Manager. Paired with an intelligent scale system, this option enables innovative, usage-based pricing models fully integrated with SafeControl Manager for streamlined operations.

Enhancing security

Safety goes beyond secure access. A **Supervision Sensor system** monitors occupancy in the deposit area, detecting how many people are present during each session. If any irregularities occur, such as multiple users entering during a single transaction, the system automatically pauses the process and alerts operators. This intelligent setup allows for fully customisable user profiles and tailored detection settings.

Customisable by design

Currently, there are more than 2000+ SafeStore Auto's operating across 38 countries.

Gunnebo has continuously refined the system over decades, ensuring the technology, user experience, and customer satisfaction remain top-class.

SafeStore Auto is available in three unit models, **Mini**, **Midi** and **Maxi**, making it a versatile solution for banks, financial institutions, private investors, hotels or casinos, regardless of space or physical limitations. Each unit is customised and configured to meet your unique location and operational needs.

SSA Mini Mobile by design

Compact and mobile, the Mini fits tight areas and offers up to 101 locker compartments in a small footprint, perfect for banks or hotels that provide premium comforts in limited spaces.

SSA Midi Compact by design

Ideal for mid-sized facilities, the Midi delivers 74–430 lockers with flexible sizing that adapts to almost any environment.

SSA Maxi Flexible by design

Tailored for high-demand, multi-floor environments, the Maxi supports up to 5,000 lockers or more and multiple user terminals. High certification grades ensure maximum security in large installations.

Reimagining the safe deposit space

With SafeStore Auto, you're not just offering a deposit solution but the best within safe storage innovation and the pure luxury of peace of mind. Whether your clients access their valuables at 2 PM or 2 AM, they will enjoy a secure, seamless experience every time.
